The Royal Filtermist FX Series is the ninth generation of Filtermist. FX Models incorporate a number of design improvements over previous versions to provide the most advanced and effective system available for the removal of mist and smoke.

**Compact design and reduced weight** provide greater mounting flexibility.

**Oil return channel** has been enlarged, enabling unit to process a greater volume of liquid.

**Gap between drum and housing** has been optimized for maximum filtration efficiency.

**Energy-efficient IE3 three-phase motor** meets all federal, state, and local electrical and safety codes.

**Exceptional vibration control** through dynamic balancing, uniform mass distribution, and neoprene isolators separating the motor/drum assembly from the housing.

**Curved drum vanes** improve airflow.

**Conical air deflector** positioned at intake accurately controls airflow within unit.

**Air flow is automatically regulated** as machine doors close to keep the correct negative pressure inside the enclosure. No need to adjust drum speed.
